piri: PIR 78:* Database

Fred. No. is the number of results predicted by chance to have a core greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         -i- PTM: The precursor is cleaved by a furin endopeptidase (By
similarity). New polymucleoride, usedtil in gene therepsy, particularly for treating or preventing e.g. arthritis. Crohir disease, Althermer's disease and organ treanglant toxicity and rejection, comprises ADMMTS polymucleotide and anceded schoolepstide. Walsh RT; Wachtmann TS, Claim 4; Fig 2, 31pp; English. 24-APR-2001; 2001BP-00303706 27-APR-2000; 2000US-0200040P Mitchell PG, PFIZ) PFIZER PROD INC WPI: 2002-084275/12 N-PSDB; ABA02549. Buckbinder L,

The present sequence represents a ADMTS percent, designed ADMTS-4.

The addition the chartcersists of the ADM (a bisinegarin Add settlement and the addition of the addition of the ADMTS-4.

ADMTS-4. The administration designed as and constant and settlement and constant and settlement and administration of the administration of
